

The Tyler Place Family Resort

All-Inclusive Family Resort Since 1933

IMPORTANT SAFETY UPDATE

PCR Tests Prior to Arrival—An Extra Layer of Precaution

Each week the Tyler Place has maintained a 98-100% rate of fully vaccinated adults and staff, and 100% of all children and teens (unless fully vaccinated) have had molecular PCR tests prior to arrival. Vermont continues to lead the country in vaccination rates and low Covid transmission rates, however, we feel the recent uptick of the Delta variant across the country warrants an extra layer of protection for our guest families.

As an added precaution we are now asking ALL adults and children over 2.5 years, regardless of vaccination status, to take the additional step of having a PCR test prior to arrival.

We recommend taking the PCR tests on the Wednesday or Thursday prior to your Saturday arrival to ensure enough time to receive the results and upload them to your dashboard prior to your arrival.

Our vaccination and prior-to-arrival PCR policies have definitely given parents more peace of mind and helped “normalize” this summer, making it a better experience for all. We intend to continue in that vein, and we hope you’ll appreciate our decision to extend this policy.
